PROFILE

Software developer trained at 42 Málaga, working across the stack from C and C++ systems programming to TypeScript microservices on PostgreSQL. Seven years in professional localization — video games, industrial and technical translation — mean I don't just implement internationalization, I know how it fails: truncated strings, encoding errors, locale-dependent layout, context lost between engineer and translator. Fluent in Russian, English and Spanish, with four further languages. Long-term Spanish work permit; available for remote, hybrid or on-site work.

TECHNICAL SKILLS

Languages C · C++ · C# · Java · Python · JavaScript · TypeScript

Systems POSIX · Linux · TCP/IP sockets · non-blocking I/O · process control · Valgrind

Web React · Node.js · Express · HTML5 · CSS3 · REST

Data PostgreSQL · SQL · Prisma ORM · schema design & migrations

Practice Git & GitHub · microservices · i18n / l10n pipelines · peer code review

PROJECTS

ft_transcendence — Multiplayer trivia platform, microservices architecture

- Designed and shipped the internationalization layer for a real-time multi-language platform: string extraction, locale fallback, and runtime language switching without reload.
- Decomposed a monolithic storage layer into isolated per-service PostgreSQL databases managed through Prisma ORM, eliminating cross-service coupling and unblocking independent deployment.
- Owned data architecture and migration strategy across a codebase built by a distributed peer team.

Stack TypeScript · Node.js · PostgreSQL · Prisma · i18n · microservices

ft_irc — IRC server in C++, written to RFC specification

- Built a standards-compliant IRC server from scratch, serving many concurrent clients over TCP/IP.
- Implemented a single-threaded non-blocking event loop around poll(), handling partial reads and back-pressure on slow clients.
- Designed a modular command-parsing system using OOP principles; verified memory integrity under Valgrind against the C++98 standard.

Stack C++98 · TCP/IP · poll() · OOP · Valgrind

minishell — Unix shell in C

- Reimplemented core Bash behaviour: pipes, I/O redirection, process control via fork() and execve(), and signal handling.
- Wrote a lexer and parser covering quoting rules and environment-variable expansion.
- Manual memory management throughout, with no leaks under Valgrind.

Stack C · POSIX · Unix · Bash semantics

EXPERIENCE

Localization Specialist — Localsoft, Málaga · Jul 2021 – Jul 2022

- Delivered video-game localization for international releases, coordinating translation and QA workflows across multiple target languages.
- Ran linguistic QA on localized builds, catching string truncation, encoding faults and context errors before ship — the class of bug that i18n code is written to prevent.
- Acted as final review gate on colleagues' output.

English Teacher — Helen Doron · Sep 2020 – Jun 2021

- Taught English across all age groups, breaking down complex grammar and phonetics for mixed-ability audiences.

Industrial Interpreter — Rutranscom · Jan 2016 – May 2017

- Embedded with engineering teams on factory construction projects, interpreting live technical discussion and translating specification documentation.

EDUCATION

Related Studies

Software Development — 42 Málaga, Fundación Telefónica · 2023 – present
Peer-to-peer, project-based curriculum: systems programming, algorithms, networking, web development. No lectures — every project is specified, built, defended and peer-evaluated.

Computer Science — GeekBrains (online) · 2022 – 2023

Application Lifecycle Management — Alison (online) · 2024

Academic Background

M.A. and B.A., Translation — Ural State Technical University · 2010 – 2015

B.A., Business Administration — Ural State Technical University · 2011 – 2015

LANGUAGES

Russian — native · English — C1 · Spanish — C1 · Dutch, French, Italian — A2

ADDITIONAL

Long-term Spanish work permit · Open to relocation and geographical mobility · Willing to travel · Valid driving licence · Two weeks' notice.
